FS0060 Challenge Problem 4 – Duplicate Letters

Write a Python program that checks for duplicate letters within words of a string.

The program should ask the user to enter a string a string, i.e., a sentence.

The program should display `True` if the sentence has any word(s) with duplicate letters, otherwise it should display `False`.

Example test cases:

"`I like kiwi fruit`" should return True because kiwi has two i's.

"`The wood is full of trees`" should return True because wood has two o's, full has two l's and trees has two e's.

"`Foxes are great`" should return `False` because there are no words with duplicate letters.
